#### **Abstract of the Disclosur**

A molding composition comprising a (co)polymer of vinylcyclohexane is disclosed. The copolymer is characterized in having an absolute molecular weight  $M_w$  of 100,000 to 450,000 g/mol, polydispersity index of 1 to 3 and maximum melt viscosity of 1000 Pa.s, as measured at 300°C and at a shear rate of 1000 sec<sup>-1</sup>. The composition is suitable for producing a variety of molded article most notably optical data storage media.
